ISSARA INSTITUTE

Connecting workers, communities, and businesses in global supply chains

Issara Institute is an independent, data-driven non-profit organization based in Asia and the United States. Our locally-based teams of experts work within global supply chains, empowering workers and collaborating with brands, retailers, suppliers, and recruitment agencies to strengthen labor recruitment practices, working conditions, and policies. We leverage our unique business intelligence, position on the ground, and partnerships to help business partners with:

- **BETTER DATA.** Worker voice-driven, AI-powered tech and data, for visibility of labor risks across supply chains
- **BETTER SOLUTIONS.** On-the-ground solutions to remediate issues in a timely manner, and address root causes

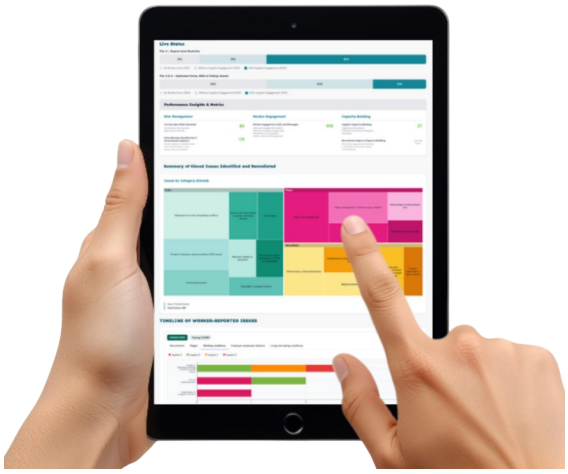

TRANSFORMING GLOBAL SUPPLY CHAINS FROM THE GROUND UP

Current situation. Global trade is evolving. New laws in the U.S., EU, Canada, and Mexico are now requiring end-to-end proof that imported products are not made with forced labor. To comply with these new human rights due diligence (HRDD) and trade integrity requirements, companies need more than an audit snapshot of their Tier 1 suppliers. They need insights into actual recruitment and working conditions across supply chains and tiers, in real time.

The challenge. Forced labor risk is not being identified effectively in global supply chains. ESG trade data can show connections, but it cannot see dynamic labor conditions within workplaces. Social audits are easily gamed snapshots that are untrusted by workers and quickly outdated - overlooking critical data that business needs. The result? Strategic sourcing decisions made with inaccurate data, unfair competition, and increasing legal and reputational risk.

The solution. The Cascading Sustainability Data Ecosystem (CASCADE) is Issara Institute's worker voice-centered tech and solutions platform used by brands, retailers, suppliers, and recruitment agencies. It provides real-time monitoring and analytics of what is happening across supply chains, and transforms worker feedback into actionable remediation and ongoing compliance data.

Worker voice down to the first mile makes ethical recruitment possible. Monitor it on CASCADE!

KEY BENEFITS – FUTURE PROOF YOUR SUPPLY CHAIN WITH BETTER DATA & BETTER SOLUTIONS

CRITERIA	ISSARA / CASCADE
DATA RELIABILITY & VALIDITY	**HIGH** High-fidelity data verified by workers via trusted, independent, multi-lingual channels
TIMING OF DATA	**REAL-TIME** Continuous monitoring through multiple worker voice channels and data streams
PRIMARY DATA SOURCE	**WORKERS** Direct reporting from workers at scale; thousands of signals per week
WORKER TRUST LEVEL	**HIGH** Independent non-profit; 10+ years of service provision to workers
REMEDIATION	**HIGH** Validated by impacted workers
SCOPE	**ALL TIERS, REGIONAL** Covers factories, recruitment agencies, migration corridors
LkSG COMPLIANCE	**COMPREHENSIVE SOLUTION** Full alignment, with high reliability risk analysis, measures, and grievance mechanisms
CSDDD ALIGNMENT	**HIGH / GOLD STANDARD** Ongoing monitoring, meaningful worker engagement, and proof of mitigation / remediation
TRADE INTEGRITY (EU FLR + U.S. TARIFF ACT, UFLPA & 21CCF)	**STRONG** Continuous worker-validated forced labor signals across product supply chains, defensible evidence to rebut forced labor allegations

Issara operates one of the most effective independent grievance mechanisms in the world in terms of detecting and remediating labor risk.

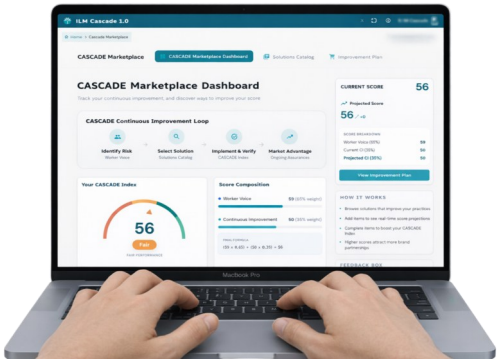

When worker-reported risks and violations are triggered, Issara and the CASCADE Community do not leave workers or companies stuck with a red flag. We act!

960,000+
Calls & messages from workers (2021-2025)

17,000+
Worker signals per month, on average

480,000+
Labor abuses detected & remediated

The **CASCADE Marketplace** connects companies directly with vetted non-profit partners that can support remediation, monitoring, and training and capacity building to support companies in addressing root causes and preventing future risks.

Every intervention and remediation is tracked in CASCADE and, importantly, the real results and outcomes are verified by the impacted workers themselves. Companies no longer have to just hope that a risk was really resolved when a CAP or non-conformity is reported as closed out. The defensible data to prove it is in CASCADE: the real-time data signals and on-the-ground action that companies need to cascade sustainability across supply chains.
